

(ANSWERS)

Learning Objective: Read a variety of scales

C

10°C

120°C

140°C

210°C

-40°C

Now calculate the difference between temperatures A and B.

$$A = 10^{\circ}\text{C}$$

$$B = 120^{\circ}\text{C}$$

so the difference between them is 110°C
